Honeywell C-Bus Integration with Jace 8000

Jace 8000, the new Tridium controller, is not equipped with slots for inserting additional cards. So it is not possible to use our C-Bus option card in Jace 8000. To enable our customers to optimally leverage the Jace 8000 to integrate Honeywell C-Bus, we have developed a special version of our intelligent external converter (IEC) optimized to connect to the Jace 8000.

IECLite, as we call this version, has the same functionality as the old option card. With Jace 8000, IECLite connects through the RS-485 serial line. The power supply 24V DC can be shared with Jace8000.

For ordering, use the part number NCBKITL.

KEY FEATURES

Optimized for Jace8000

Seamless Niagara4 Integration

Serial connection over RS-485

Reading and Writing DDC Points

Reading and Writing Extended Attributes

Alarm Integration

Device and Point Discovery

Time Program Editor

Parameter Editor

Date/Time Synchronization

Compatible with all XL5000 controllers and with Zone Manager
